THE WRIGHTGUARD™

THE WORLD'S FIRST
MAGNETIC TETHERED
MOUTHGUARD
SUPERIOR PROTECTION
FOR ALL SPORTS

WHY WEAR THE TWG - MOUTHGUARD?

Other mouthguards on the market that claim to protect players are often inadequate. They are not thick enough to absorb impacts, fail to facilitate optimal oxygen intake and position the jaw and disc complex incorrectly. As a result, they increase susceptibility to injuries such as tooth fracture, subluxation of the teeth and condyle, concussions and other detrimental long-term effects such as TMD (Temporomandibular Disorders).

With TWG - The Wrightguard's new, advanced technology, athletes young and old can expect better **Prevention**, **Protection** and **Performance**.

THE ULTIMATE IN PROTECTION AND PERFORMANCE

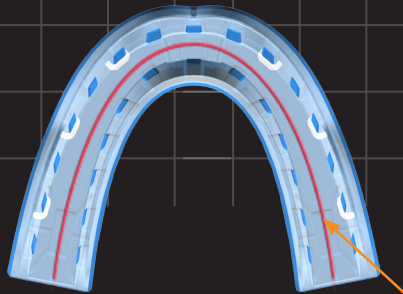

At TWG, our belief is that "form follows function". If the mouth guard is properly fitted, the functionality and performance of the mouth guard will naturally follow. That's why The WrightGuard uses an innovative, athlete-tested boil and bite design.

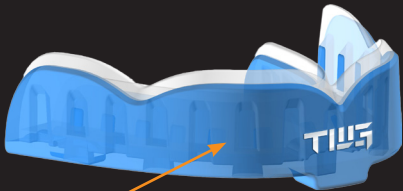

TWG is engineered by Dental Specialists to unlock your power and potential while protecting your most important asset- your jaw structures and brain. Whether you need protection in contact sports or you just want to improve your game, TWG gives every athlete a protective and performance edge.

PERFORMANCE SOLUTIONS FOR EVERY ATHLETE

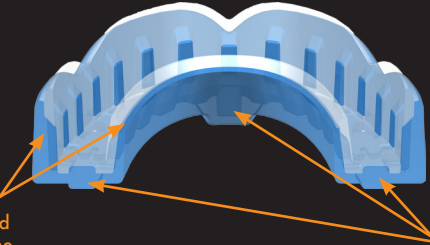

TWG's sleek design allows for better comfort, speech and airway exchange. The one of a kind self-aligning system allows for a better fit, "custom feel" and correct jaw positioning in the TMJ complex. Correct jaw positioning allows for protection against tooth injury, jaw fracture and can even help reduce the incidence of concussions. Proper jaw positioning also allows for better spinal alignment and unlocks the athlete's true performance by increasing balance, agility, strength and stamina.

Unique arch fit allows for better fit, comfort and protection.

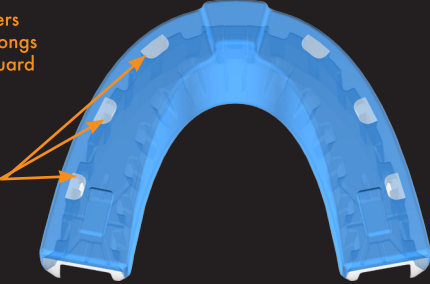

Patented durable exoskeleton reduces the incidence of tooth, jaw, TMJ and brain injuries.

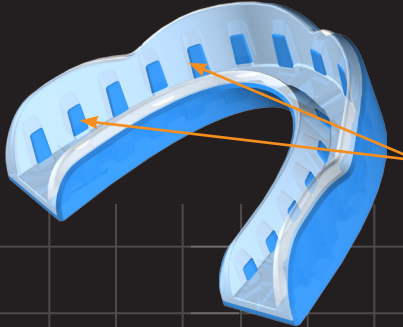

State-of-the-art blend of EVA/Polyurethane offers shock absorbing capability and better bonding between layers to resist tear and prolongs the life of the mouthguard

Shock absorbing scaffolds protects the teeth, jaw, and TMJ structures and promotes airway exchange

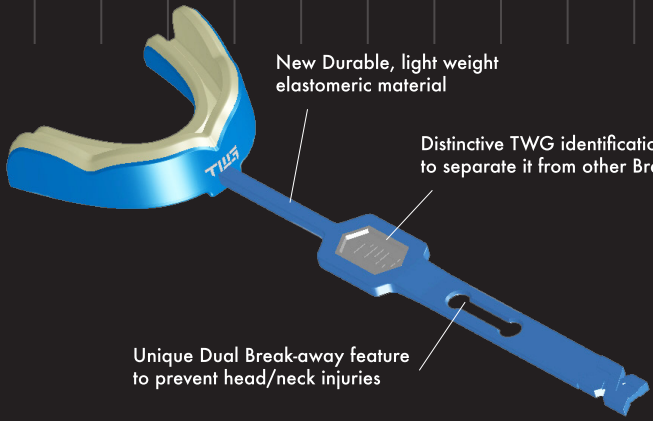

Vented design allows excess material to flow ensuring complete seating and accurate fit

Patented Self Aligning System (SAS) guarantees accurate fit and uniform thickness for protection

TWG XTREME + BREAK AWAY STRAP

New Durable, light weight elastomeric material

Distinctive TWG identification badge to separate it from other Brands!
