

TheWrightGuard.com

Thank you for purchasing one of the leading sports mouthguards in the industry. Your TWG mouthguard (magnetic edition) contains a neodymium magnet. Special care is needed when handling this item.

The neodymium magnets are extremely strong and must be handled with care to avoid personal injury and damage to the magnets. Fingers can get severely pinched between two attracting magnets. Neodymium magnets are brittle, and can peel, crack, or shatter if allowed to slam together. Eye protection should be worn when handling these magnets because shattering magnets can launch pieces at great speed.

The strong magnetic fields of these magnets can damage magnetic media such as floppy disks, credit cards, magnetic I.D. cards, cassette tapes, video tapes and similar items. They can also damage televisions, VCR's, computer monitors and other CRT electronics. Never bring neodymium magnets near any of these items.

Children should not be allowed to handle neodymium magnets as they can be dangerous. Small magnets pose a choking hazard and should never be swallowed or inserted into any part of the body.

Never allow neodymium magnets near a person with a pacemaker or similar medical device. The strong magnetic fields of the magnet can affect the operation of such devices.

Neodymium magnets are brittle and prone to chipping and cracking. Neodymium magnets lose their magnetic properties if heated above 175°F (80°C). Neodymium magnets should never be burned, as burning them will create toxic fumes.
